

Electrical Characteristics Data

(CSP Series)

●1000 hours durability characteristics (65°C 6.0V)

CSP-6R0L755R-TW/ 6.0V 7.5F/ 25*13*27

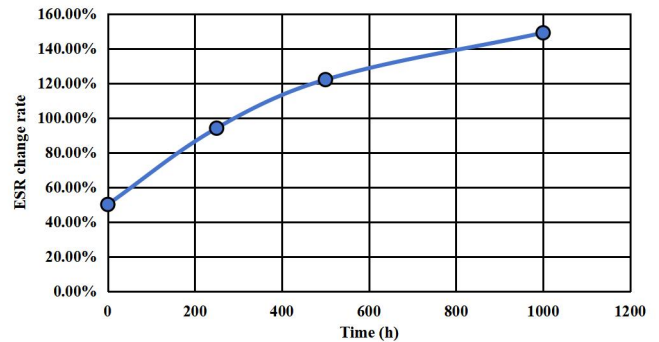

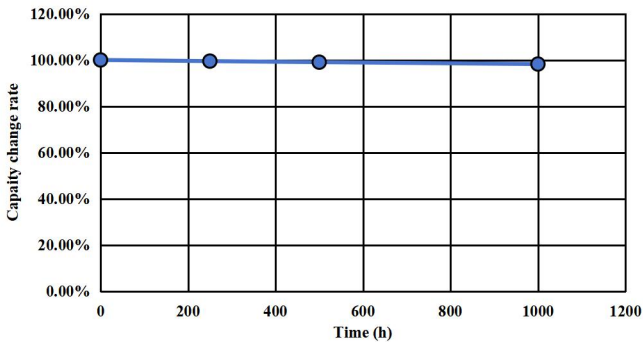

Testing Method: Place the product in a constant temperature convection oven at 65°C, then apply a voltage of 6.0V to the product, and periodically remove the product for performance testing.

●1000-Hour High-Temperature Storage Characteristics (65°C)

CSP-6R0L755R-TW/ 6.0V 7.5F/ 25*13*27

Place the product in a constant temperature convection oven at 65°C without applying voltage, and periodically remove the product for performance testing.

*The above data is for reference. If the model parameters you require are not available, please contact CDA

Note: If there are changes to the test data, we regret to inform you that no separate notification will be provided. We recommend obtaining technical specifications from CDA to ensure the component suits your needs.
