## □ 超級電容器使用注意事項

### Precautions for the use of super capacitors

#### □ 超級電容器的極性和使用電壓

##### ■ Polarity and voltage of super capacitor

1. 超級電容器具有極性，請勿施加反向的電壓或者交流電壓。若長時間施加反向電壓的話不僅會縮短其使用壽命，還可能造成漏液等致命傷害。

2. 超級電容器的額定電壓為超級電容器正常工作可使用的最高電壓，所以超級電容器兩端請勿施加高過額定電壓的電壓，在高電壓下使用不僅會縮短使用壽命，還會因電化學反應造成氣體發生量增加，漏液，破裂等致命故障。

1. The super capacitor has polarity, please do not apply reverse voltage or AC voltage. If the reverse voltage is applied for a long time, it will not only shorten its service life, but may also cause fatal injuries such as liquid leakage.

2. The rated voltage of the super capacitor is the highest voltage that can be used in the normal operation of the super capacitor, so please do not apply a voltage higher than the rated voltage on both ends of the super capacitor. Using under high voltage will not only shorten the service life, but also due to electrochemical reaction Fatal failures such as increased gas generation, liquid leakage, and rupture.

#### □ 有紋波電流流經電路的使用注意事項：

##### ■ Precautions for use of circuits with ripple current flowing through them:

1. 超級電容器內部電阻要比其他電解電容器高，紋波電流會使其發熱，在預測使用壽命時要加入考慮範圍；

2. 請在加上紋波電流造成的電壓變動部分的最大使用電壓以下使用；

3. 超級電容器內部電阻較高，一般不適用於紋波吸收，請用符合用途的低內阻產品。

1. The internal resistance of supercapacitors is higher than that of other electrolytic capacitors, and the ripple current will cause it to heat up. It should be considered when predicting the service life;

2. Please use it below the maximum operating voltage of the voltage fluctuation part caused by the ripple current;

3. The internal resistance of supercapacitors is relatively high, which is generally not suitable for ripple absorption. Please use low internal resistance products suitable for the purpose.

#### □ 周圍溫度對超級電容器的影響

##### ■ The influence of ambient temperature on supercapacitors

1. 超級電容器的使用壽命受使用溫度的影響，一般情況下，使用溫度降低 10 °C，超級電容器的使用壽命會延長 2 倍，請儘量在低

於最高使用溫度的低溫環境下使用。超過最高使用溫度使用的話，可能會造成特性急劇劣化，破損。

2. 超級電容器的使用溫度不僅要確認設備周圍溫度，內部溫度，還要確認設備內發熱體（功率電晶體、電阻等）的放射熱，紋波電流引起的自行發熱溫度。此外，還請勿將發熱體安裝在超級電容器的背面。

1. The service life of supercapacitors is affected by the operating temperature. Under normal circumstances, if the service temperature is reduced by 10°C, the service life of the supercapacitors will be extended by 2 times. Please try to use them in a low temperature environment below the maximum use temperature. If it is used above the maximum operating temperature, it may cause rapid deterioration and damage to its characteristics.

2. The use temperature of supercapacitors should not only confirm the surrounding temperature and internal temperature of the equipment, but also confirm the radiant heat of the heating elements (power transistors, resistors, etc.) in the equipment and the self-heating temperature caused by ripple current. In addition, do not install the heating element on the back of the super capacitor.

#### □ 壽命計算

##### ■ Life calculation

$$L_2 = L_1 \times 2(T_1 - T_2 / 10)$$

L1 : 溫在溫度 T1°C 時的壽命(h)

L2 : 在溫度 T2°C 時的壽命(h)

T1 : 分類上限 (最大使用) 溫度(°C)

T2 : 為計算出壽命的周圍溫度+紋波電流發熱溫度(°C)

\* 周圍溫度也影響壽命。在下列超過條件的環境下使用時，請諮詢本公司。

L1 : Lifetime at temperature T1°C (h)

L2 : Lifetime (h) at temperature T2°C

T1: Classification upper limit (maximum use) temperature (°C)

T2 : Ambient temperature + ripple current heating temperature (°C) for calculating the lifetime

\* Ambient temperature also affects life. Please consult our company when using in an environment exceeding the following conditions.

**作為後備電源時的電壓降**

**■ Voltage drop when used as a backup power supply**

當主電源關閉時，超級電容器將從電源失效檢驗模式轉為後備電源工作模式，此時由於瞬間啟動電流及電容內阻將導致開路電壓下降。請根據相關產品介紹中所列出的阻抗和使用電流確定正確的產品型號。

When the main power supply is turned off, the super capacitor will switch from the power failure inspection mode to the backup power supply operation mode. At this time, the open circuit voltage will drop due to the instantaneous starting current and the internal resistance of the capacitor. Please determine the correct product model based on the impedance and current used in the relevant product introduction.

**串聯**

**■ Tandem**

串聯超級電容器時要保證電壓平衡，可考慮將電阻器與超級電容器並聯，而起到漏電分壓的作用。

When connecting a super capacitor in series, it is necessary to ensure the voltage balance. Consider connecting the resistor in parallel with the super capacitor to play the role of leakage voltage divider.

**超級電容器的焊接**

**■ Welding of super capacitors**

在印刷電路板焊接超級電容器產品時，如果超級電容器熱過度應激的話，不僅其電氣特性劣化，而且還會因氣密性不良以及內壓上升造成漏液，短路等超越外觀的致命故障，請遵守以下內容：

**1. 使用電烙鐵焊接：**

作業時，烙鐵請勿接觸到產品主體，請將烙鐵的溫度控制在 350 °C 以下，4 秒以內焊接完成。如果連續焊接作業，請預留 15 秒的時間間隔在 3 次內焊接完成。

**2. 流動焊接：**

a. 焊接時超級電容器請勿接觸焊錫槽；

b. 焊接時請將產品主體溫度控制在 100 °C 60 秒以內，峰值溫度 105 °C 以內進行。標準條件如下圖所示。另外，即便是在規定溫度範圍內，產品溫度也有可能因電路板尺寸，周圍零部件的關係上升幅度超過預期，因此建議確認焊接時超級電容器產品主體溫度。

**c. 其他熱應激**

使用硬化烤箱烘烤電路板，固定樹脂時，請將產品表面溫度控制在 100 °C 以下 60 秒以內（最高 105°C）。此外，該時還應將產品的殘餘電壓控制在 0.3 V 以下；

在電路板上焊接過一次的產品拆下後請勿再使用，拆卸可能會發生熱應激，進行手焊修正時請遵照（1）使用電烙鐵焊接的內容；

拆卸，修正超級電容器周圍的零部件時，

注意不要讓超級電容器過渡受熱

**d. 其他**

為提高可焊接性，在引線、焊腳上會有鍍錫層，因此銼刀等摩擦可能會損傷鍍錫層造成可焊接性降低。

對引線、焊腳施加強力的話，可能會發生斷裂，偏離造成特性劣化。

Soldering super auxiliary products on the printed circuit board, if the super auxiliary heat assist function is used, you can electrify yourself, and there will be typical critical faults such as poor air tightness, increased internal pressure, liquid leakage, short circuit, etc. Please be humble with the following:

**1. Use an electric soldering iron to solder:**

During the working time, the soldering iron should not touch the main body of the product. The temperature of the soldering iron should be controlled below 350°C, and the soldering should be completed within 4 seconds.

**2. Circulation welding:**

a. Super prevent contact with solder bath during soldering;

b. Temperature: When welding, the temperature of the main body of the product is controlled within 100°C for 60 seconds, and the maximum temperature is within 105°C. The prescribed standard conditions are shown in the figure below. In addition, it may be within the temperature range, and the product temperature may also be due to the size of the circuit board. It should be because the upper limit of the product exceeds expectations. Therefore, it is recommended to confirm the main body temperature of the super product during soldering.

**c. Other heat stress**

Use the hardening oven to bake the circuit board. When fixing the resin, please control the surface temperature of the product under 100 °C within 60 seconds (maximum 105°C). In addition, the residual voltage of the product should be controlled below 0.3 V at this time;

Do not use the product that has been soldered on the circuit board once after it is removed. Thermal stress may occur when removed. When performing hand soldering correction, please follow the content of (1) soldering with an electric soldering iron;

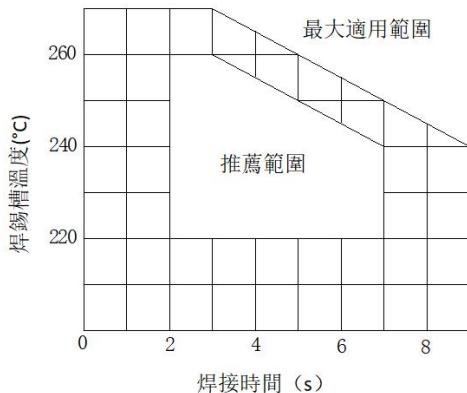

When disassembling and correcting the parts around the super capacitor, be careful not to overheat the super capacitor

**d. Other**

In order to improve the solderability, there is a tin-plated layer on the leads and solder feet. Therefore, friction such as files may damage the tin-plated layer and reduce the solderability.

If a strong force is applied to the lead wire and solder foot, it may break and deviate and cause the characteristics to deteriorate.

	此符號表示一般注意事項 This symbol indicates a general caution.

**以防止電容器中的品質問題**

**■ Prevent quality problems in capacitors**

1.不建議回流焊接或波浪焊電容器（手工焊接），以免引起電容器的劣化，嚴重的在這種情況下，電容器可能會開始膨脹或洩漏液體失效。

2.在焊接過程中避免使電容器過熱：若在焊接中使電容器出現過熱現象，會降低電容器的使用壽命，例如：如果使用厚度為1.6mm的印刷線路板，焊接過程應為260°C，時間不超過5s；(焊接類型：Sn — 3Ag — 0.5Cu 焊接槽溫度：260±5°C 浸漬時間：10±1秒 浸漬深度：從本體1.5~2.0mm)。

3.注意工作溫度，環境溫度對電容器的使用壽命影響很大，通過將溫度降低10攝氏度，其壽命大約可以增加一倍。

4.注意洗滌和乾燥，一些清潔劑或高溫乾燥會導致電容器劣化，如果您需要清洗電容器，請諮詢我們。

5.請在額定電壓範圍內使用，請在額定電壓(2.5V-3.8/4.0V)範圍內使用本產品。若外加電壓超過額定電壓，則會損害電容器的壽命，有時還會導致發熱，漏液等。

6.本電容器加裝有壓力閥，主體內部的壓力異常上升時，將損壞此壓力閥，排放內部的氣壓。為了使壓力閥有效，設置之時請在壓力閥的上部留出規定空間(直徑未滿Φ18mm的產品：2mm以上，直徑Φ18mm以上的產品：3mm以上)。

1. It is not recommended to reflow soldering or wave soldering capacitors (only hand soldering), so as not to cause deterioration of the capacitors. Seriously, in this case, the capacitors may start to expand or leak liquid.

2. Avoid overheating the capacitor during the soldering process: If the capacitor is overheated during soldering, the service life of the capacitor will be reduced. For example, if a printed circuit board with a thickness of 1.6mm is used, the soldering process should be 260°C and the time should not exceed 5s.; (Welding type: Sn — 3Ag — 0.5Cu Soldering bath temperature: 260±5°C, immersion time: 10±1 seconds, immersion depth: 1.5~2.0mm from the body).

3. Pay attention to the operating temperature. The ambient temperature greatly affects the lifetime of the capacitor. By reducing the temperature by 10deg.-C, the lifetime can be approximately doubled.

4. Pay attention to washing and drying. Some detergent or high temperature drying cause deteriorates of capacitor. If you need to wash capacitors, consult us.

5. Please use it within the rated voltage range. Please use this product within the rated voltage (2.5V-3.8/4.0V). If the applied voltage exceeds the rated voltage, the life of the product will be damaged, and sometimes it will cause heat, leakage, etc.

6. When the pressure inside the main body rises abnormally, the pressure valve will be

damaged and the internal air pressure will be discharged. In order to make the pressure valve effective, please leave a predetermined space above the pressure valve when installing (products with a diameter of less than Φ18mm: 2mm or more, diameter Products above Φ18mm: above 3mm).
